

Patient Details

Name : Priti Khanna
Date of Birth : 1 Jun 1951
Age : 71 years/Female
Referred By : Self

Report Details

Name : Anti Cardiolipin Antibodies
(IgG,IgM,IgA)
Sampling Received At :
2023-01-25T00:17:37.900+05:30

Name	Result	Normal Range
Anti Cardiolipin IgA Antibodies(PL-IgG-U/mL)	6	0-12
Anti Cardiolipin IgM Antibodies(PL-IgM-U/ml)	6	0-12
Anti Cardiolipin IgG Antibodies(PL-IgG-U/mL)	6	0-12

Authorized By

Dr. Amitabh Bachchan
MBBS
Registration Number : 12345678

Test Methods

1. EIA

Notes, Interpretation & Interfering Factors

- Positive IgA phospholipid (cardiolipin) antibody results with negative IgG and IgM phospholipid (cardiolipin) antibody results are non diagnostic for APS.
- Detection of phospholipid (cardiolipin) antibodies is not affected by anticoagulant treatment.
- Lesser levels of IgG and IgM phospholipid (cardiolipin) antibodies and antibodies of the IgA isotype (APL) may occur in patients with clinical signs of APS but the results are not considered diagnostic.
- Phospholipid (cardiolipin) antibodies must be detected on 2 or more occasions at least 12 weeks apart to fulfill the laboratory diagnostic criteria for APS.
- Positive and strongly-positive results for IgG and IgM phospholipid (cardiolipin) antibodies are diagnostic criteria for antiphospholipid syndrome (APS)

This is a sample report, on a dummy patient, signed by a dummy doctor. The actual report format may vary and you are requested not to compare with the same.

- 'Sample Received At' refers to the date and time of the first sample collection done for a patient, for a given set of tests. In case of subsequent collections (eg in case of Fasting and PP, suppression or stimulation tests) the time may not reflect the actual time of collection.
- Methods of measurement are mentioned together at the bottom of each report, test units to the right of each test name. All reports are subject to clinical correlation and not intended for forensic purposes.
